

ORGANIZATIONAL INNOVATION ENHANCEMENT TECHNIQUE

ABSTRACT

A human social system has a tendency to self
organize around one or more of the production, diffusion
5 and application of organizational knowledge. One or more
of the production, diffusion and application of such
knowledge can be enhanced by synchronizing knowledge
policies with the tendency. The synchronization may be
accomplished by proposing knowledge embryology, politics,
10 diversity and connectivity policies (step S10). The
proposed knowledge politics policy is practiced in the
social system and is evaluated and/or refined (step S20).
The proposed knowledge embryology, diversity and
connectivity policies are practiced in the social system
15 with the evaluated proposed politics policy, and the
policies are evaluated and/or refined as needed (step S30).
